

Product Information

Düsseldorf, June 2010, Ad.A.Klein Transporttechnik recently supplied a brand new electric swivel arm pillar crane to the Royal Watersports Society Loosdrecht (KWVL). This multifunctional crane is 8 meters high, has a 5.8 meter swing, can rotate through 360 degrees and has a lifting capacity of either 4000 or 1000 kilos.

The crane is fitted with two independent Hitachi electrical chain hoists.

It includes a stationary 1-ton hoist with hoisting speeds of 4.6 and 1.2 meters per minute. This crane has been set up so that KWVL members themselves can use their membership card to activate the crane to lift their boats out of the water.

The 4-ton Hitachi lifting unit with electrical trolley that lifts 2.8 and 0.7 meters per minute can move heavier boats. Only the harbor master can operate this hoist by means of a key-operated switch. The crane has a single combined operating console, is equipped with lights and has been painted in a color that blends in with the surrounds.

An external automated system protects the crane against unauthorized use. A special 4-ton lifting beam is supplied with the crane for the multifunctional lifting of various types of boats.
