OIL FREE

Oil Free Scroll

Oil free scroll compressor air end for original equipment manufacturers

Hitachi's oil free scroll compressor is designed for low vibration, high reliability and long maintenance intervals. The compact air end comes with built in cooling system and filtering elements. Over sized roller bearing is used to increase system lifecycle. An oil less, low vibration, low noise compressor system can be achieved with the addition of standard components such as motor, belts, plumbing and cooling.

Oil Free Reciprocating

Oil free reciprocating compressor air end for original equipment manufacturers

Hitachi's oil free reciprocating compressors use an innovative lip ring piston which results in reduced vibration and hence reduced noise. The LE series comes equipped with both the air end and motor together in one compact housing. The LE series is available in both 3 phase and single phase variants. Single phase units feature a non-load starting system such that air purge or soft start equipment is not required.

High Pressure

Newly developed cooling system and lip ring material allow for standard 0.8 MPa (1.0 MPa available)

Low Noise

Vibrating lip ring compression method, crank room air intake and optimization of suction port enable a reduction in tone of operating noise

Long Maintenance Interval

Overhaul periods of up to 8,000 hours (0.8 MPa)

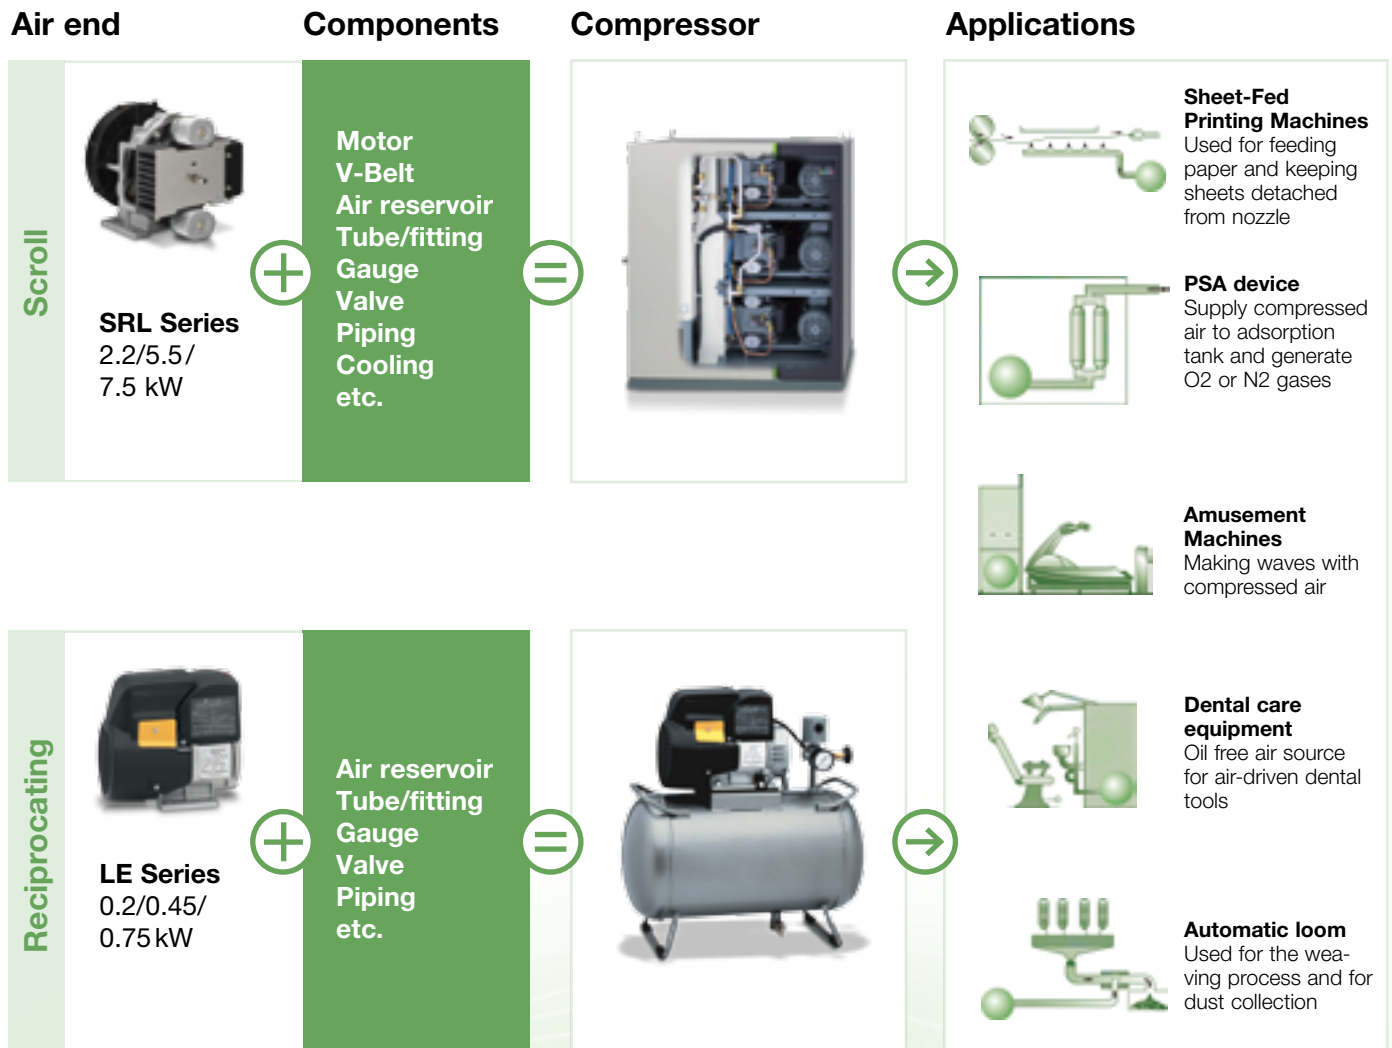

Versatile

Easy integration into a variety of applications
